Ekoenergetyka with framework agreement of up to 37 million EUR for RATP Paris

Ekoenergetyka-Polska S.A. has signed another framework agreement with the public carrier from the French capital - Regie Autonome des Transports Parisiens, and will provide fast charging systems for electric buses to Paris.

Under the new, yet another contract, the Polish technology company will deliver fast charging infrastructure for zero-emission city vehicles to Paris, with a total value of up to 37 million EUR. The first order under the new contract is for 349 charging stations. Since 2018, Ekoenergetyka has been one of the main suppliers of fast charging systems for the Paris-based carrier.

The RATP by 2025 is ambitiously committed to creating a 100% environmentally friendly, zero-emission bus fleet in the Paris region. Achieving this goal requires the conversion of half of bus depots and equipping them with the most modern charging systems.

"The continued cooperation with RATP is for us the best confirmation of the quality of our products, services and business relationships. Our charging infrastructure complies with the requirements of the third largest public transport operator in the world, which also proves the company's global potential. Congratulations on the scale and systematic implementation of the entire project undertaken by RATP and I hope that our solutions will mostly supply the zero-emission public transport of Paris," said Bartosz Kubik, co-founder and CEO of Ekoenergetyka.

Ekoenergetyka-Polska S.A. for over 12 years has been introducing innovative solutions for electromobility and is a leading producer of high-power charging infrastructure in Europe. The company provides fast charging systems for electric city buses to most European capitals. Ekoenergetyka also implements solutions for long-distance transport and guarantees full charging of the vehicle during a 45-minute pause, obligatory for truck and coach drivers throughout the European Union.
