

PRESS RELEASE

Ekoenergetyka discovers Zielona Góra through its cuisine – the new “City in good taste” now available

Zielona Góra, 30 October 2025 – Ekoenergetyka-Polska S.A., a European leader in electromobility, presents a unique publication – the **“City in good taste”**, a guide to the culinary treasures of Zielona Góra and the Lubusz region. This special project was created with guests and partners visiting Ekoenergetyka's headquarters in mind.

“City in good taste” is an innovative way to combine business with local culture. Guests visiting our headquarters in Zielona Góra can not only see where our chargers are created, but also explore the culinary attractions of the region, which strengthens business relations and builds long-term partnerships.” – says **Paweł Mijas**, Head of the Marketing and PR Office at Ekoenergetyka.

Flavors that tell the story of the region

The “City in good taste” is more than a guide – it is a journey through the history, tradition and contemporary culinary scene of Zielona Góra. The publication combines local recipes, original interpretations of Lubusz cuisine, and recommendations of restaurants, shops and producers who shape the city's flavor identity every day.

Contributors invited to co-create the guide included, among others, **Dr. Grzegorz Biszczanik**, historian and regional expert, and **Kacper Szafrąński**, a chef known for reinterpreting historical regional recipes. Their knowledge and passion enabled the creation of an authentic portrayal of local culinary traditions.

Zielona Góra in a new light

The publication presents Zielona Góra as an open, diverse and inspiring city – from iconic spots to modern restaurants. It also features local products and the places where they can be found, sites connected to the city's winemaking traditions, and attractions that cannot be missed when visiting Zielona Góra.

A project created out of love for the city

As a company strongly connected to the region, we aim not only to develop electromobility and modern technologies but also to promote Zielona Góra – the city where our chargers are produced, and where our factory, laboratories and training center operate. This is where the heart of Ekoenergetyka beats – and where our guests begin their journey into the green side of innovation.

Each year, Ekoenergetyka hosts many visitors from around the world – partners, trainees, and participants of workshops held at the Ekoenergetyka Training Center, who often discover the charm of our city only upon arrival. The “City in good taste” was created especially for them – to help them get to know Zielona Góra, its unique atmosphere, and the places worth visiting.

“This is our invitation to discover the city from a different perspective – through its flavors and stories. Zielona Góra is not only the birthplace of Ekoenergetyka but above all a place we are proud of and want to promote worldwide.” – says **Paweł Mijas**, Head of the Marketing and PR Office at Ekoenergetyka.

A publication for everyone

The guide has been prepared in two language versions, Polish and English, with respect for the environment – printed on eco-friendly paper with care for aesthetics and local character. The book is also available online by scanning the QR code in the printed version or by visiting the project's website.

About Ekoenergetyka

Ekoenergetyka is a leading European manufacturer of fast-charging stations for electric vehicles. Founded in 2009 as a university research project, the company has become a key provider of charging infrastructure for public transport operators and charging point operators (CPOs) in over 40 countries across 3 continents. Supported by the Enterprise Investors private equity fund, Ekoenergetyka is dynamically expanding in the EV, E-Truck and E-Bus sectors – delivering modern charging technologies, **scalable solutions, 24/7 service, training support, and expert knowledge in electromobility**. This approach is strengthened by the company's **proprietary software solutions**, ensuring seamless charger operation, remote diagnostics, dynamic load management, and system integration.
